BiCS 3D-NAND

BiCS delivers smallest chip area of any published 3D-NAND

BiCS U-shaped NAND string enables maximum array efficiency

- Leverages existing NAND Fab infrastructure. Does not need EUV.
- Scaling achieved by increasing number of layers

Good progress in BiCS development

Challenges for all 3D-NAND manufacturing

- NAND poly TFT devices, a first in volume manufacturing
- High aspect ratio etching of large number of layers and its control
- High volume manufacturing requires new etching equipment and techniques for scaling to high number of layers
